

METHODS AND COMPOSITIONS FOR GALACTOSYLATED GLYCOPROTEINS

Abstract of the Disclosure

5 This invention relates to novel glycoprotein glycoform
preparations comprising the substantially homogenous glycoprotein
glycoforms. More particularly the invention relates to
substantially homogenous glycoprotein preparations comprising a
particular Fc glycan and methods for producing, detecting,
10 enriching and purifying the glycoforms. The invention further
relates to immunoglobulins and especially antibodies comprising a
CH2 domain having a particular glycan. Provided are compositions
including pharmaceutical compositions methods of using the
preparations as well as articles of manufacture comprising the
preparations.
